

Lateral Critical Casimir Forces

Substrate: hydrophilic
Particles: hydrophobic (lutidine)

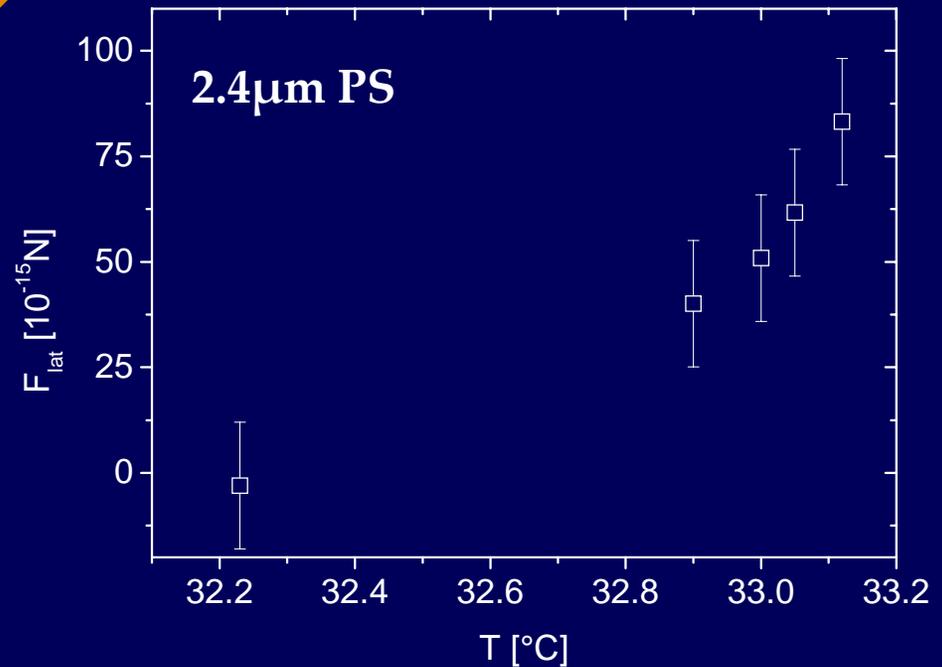

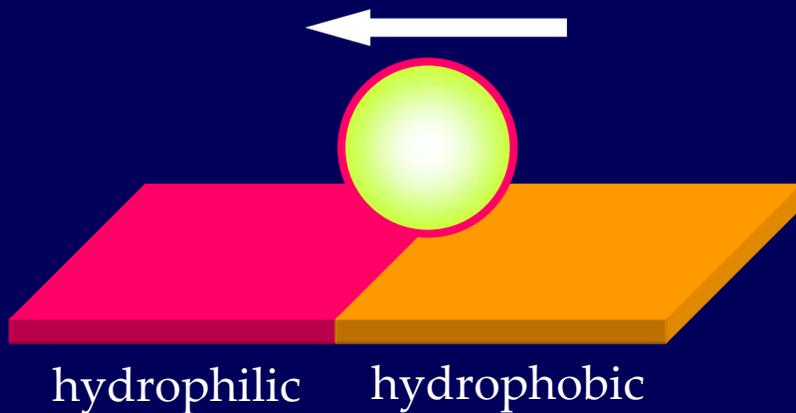

Temperature dependent pair potential

Patterned Substrates

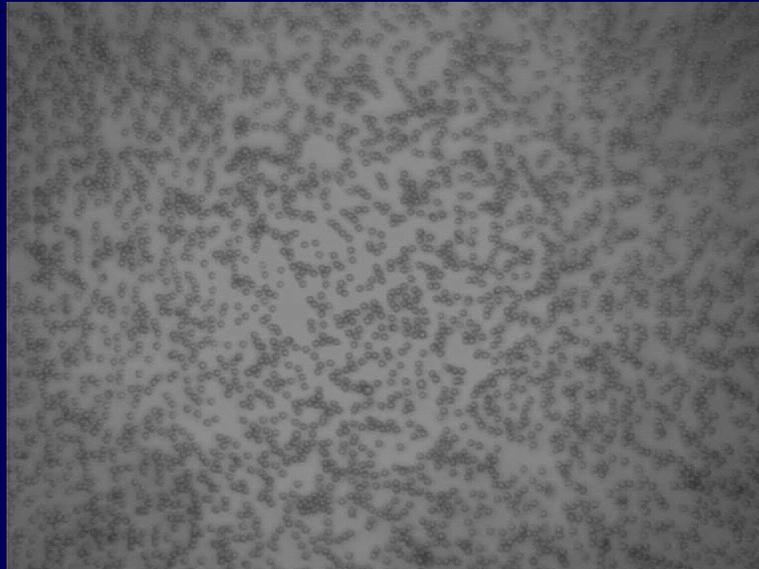

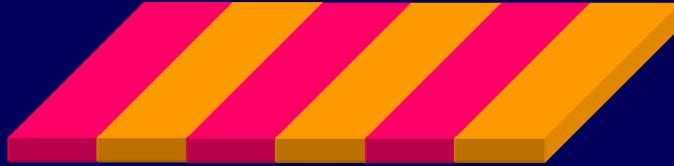

1. Chemical Step

patterning: change of surface properties with focussed ion beam

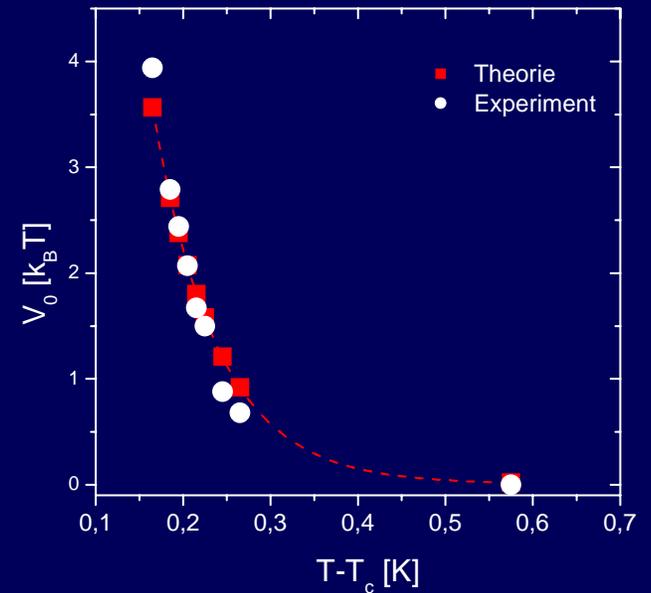

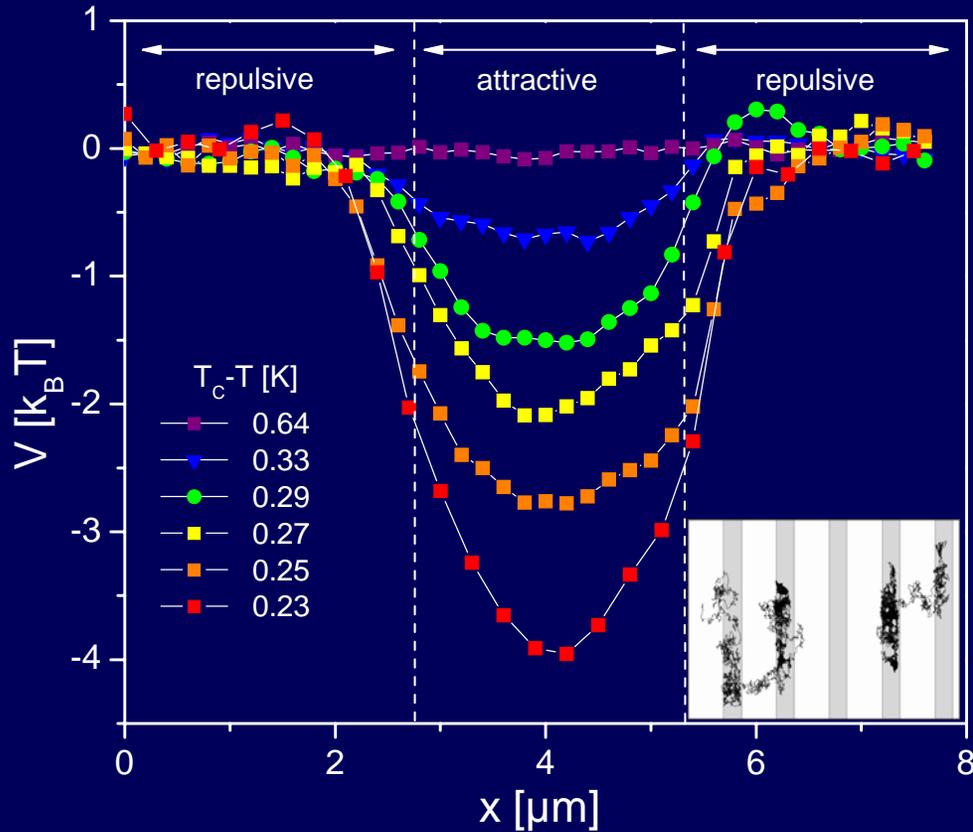

Patterned Substrates

2. Lines

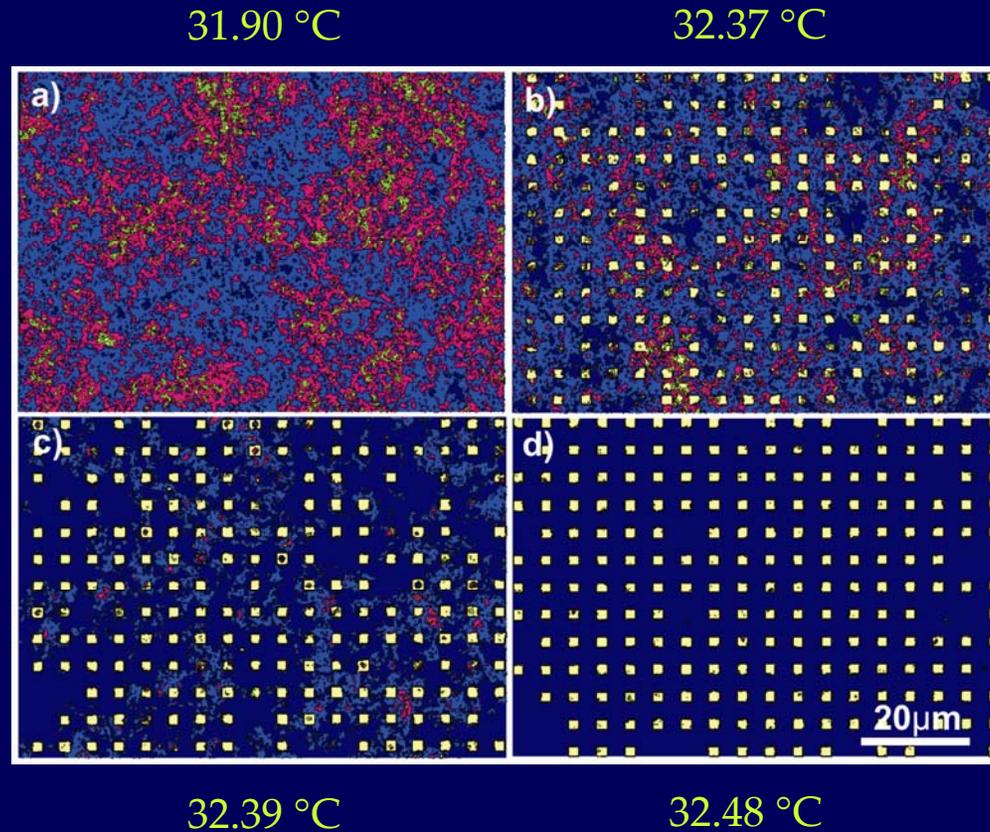

(x 8)

Temperature-dependence

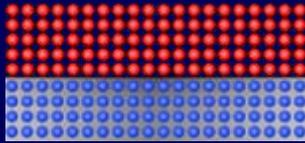

Patterned Substrates

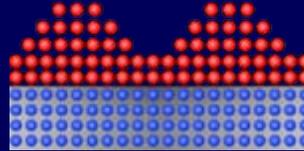

3. Squares

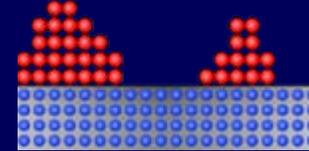

Modes of thin film growth

Frank-van-der-Merwe

Stranski-Krastanov

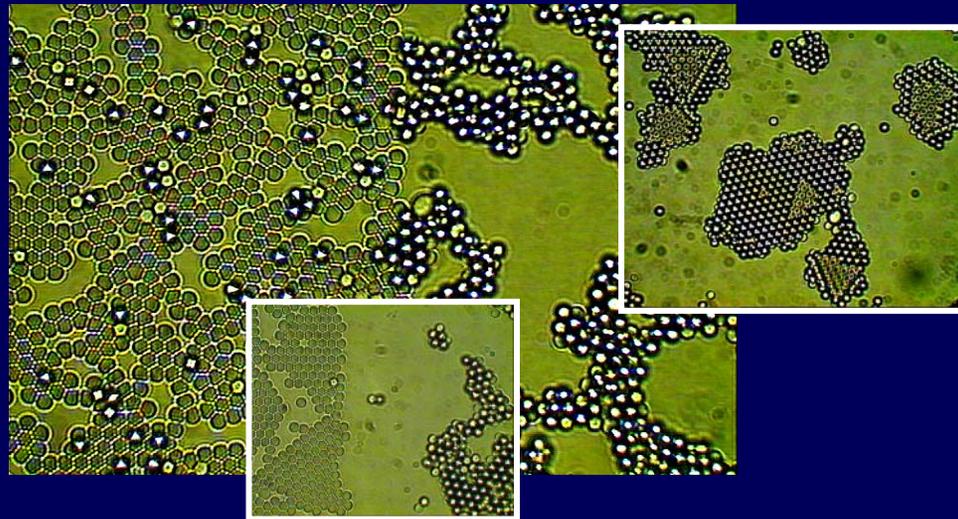

Volmer-Weber

→ increasing adsorbate – adsorbate interaction strength →

particles:
hydrophilic

hydrophilic

hydrophobic

new opportunities for colloids as model systems
